EDUCATION

LNCT GROUP OF COLLEGES 2020 - 2024

Bachelor Of Technology - 82.80% Bhopal, India

Relavant Coursework: Operating Systems, Computer Networks, Database Management Systems, Cloud Computing, Data Structures & Algorithms

EXPERIENCE

Tata Consultancy Services (TCS) 2024 – Present

System Engineer Pune, India

- Frontend Developer for a global Fortune 500 consumer goods giant (Unilever) serving 3.4 billion consumers daily across 190 countries as a client.
- Architected the Statistical Process Control (SPC) application, a mission-critical platform used by 500+ quality engineers across 20+ manufacturing sites to monitor the performance of global supply chains.
- Engineered the user interface for the newly launched Causal and Impact module using Angular and D3.js, developing 5+ complex configuration screens and interactive dashboards that allow users to train, parameterize, and visualize causal relationships in machine learning models.
- Resolved 20+ critical production bugs and optimized data rendering logic, which significantly enhanced application stability and streamlined the analytical workflow for quality control teams.

PROJECTS

Gold Price Prediction 2024 - 2024

- Aggregated and pre-processed a comprehensive 13-year longitudinal dataset (20082021), transforming raw financial data into a structured pipeline for high-fidelity predictive modeling.
- Engineered multi-asset feature sets including market indices (SPX, GLD), precious metals (SLV), and G10 currency pairs to capture macroeconomic volatility and cross-market correlations.
- Implemented a Random Forest model using Scikit-Learn with 500+ estimators to analyze 13 years of financial data, accurately mapping complex non-linear correlations.
- Conducted comprehensive model evaluation using metrics like (R2) R Squared Error, coupled with hyperparameter tuning, to optimize the Random Forest model for improved accuracy.

Talk-A-Tive 2023 - 2023

- Architected a full-stack, real-time communication platform using the MERN stack and Socket.io, implementing a bi-directional event-driven architecture to facilitate instantaneous message exchange with sub-100ms latency.
- Established secure user authentication and authorization mechanisms to protect user privacy and data, serving 20+ users.
- Facilitated real-time communication and updates by integrating Socket.IO, allowing 20+ users to send and receive messages without the need for page refreshes.

DEADBY SHOT 2021 - 2022

- Developed and released Dead by Shot, an FPS game in Unreal Engine 4, featuring intense battles against extraterrestrial creatures.
- Led the design, modeling, and gameplay mechanics implementation, optimizing performance for a seamless gaming experience enjoyed by a player base of over 100+ users.
- Conducted extensive playtesting, iteratively improving gameplay and user experience based on feedback from 100+ players.
- Utilized Blender for 3D modeling and Substance Painter for realistic textures, materials, and shading.

TECHNICAL SKILLS

Languages : Python, JavaScript, C++, Java, TypeScript
Tools : Figma, Canva, Git, GitHub, Blender
Web Development : HTML, CSS, REST APIs, ReactJS, Next.Js, AngularJS, SQL (MySQL)
